BARKER'S

PLANE TRIGONOMETRY

WITH TABLES

By EUGENE HENRY BARKER

Head of the Department of Mathematics, Polytechnic High School, Los Angeles, California

86 Illustrations, vii + 172 Pages. Cloth $1.00 Postpaid

The author believes that greatest stress should be laid upon thorough familiarity with trigonometric functionality; acquaintance with the interdependence of the functions; a knowledge of the methods of trigonometric analysis; power of initiative in development of formulas and skill in their application to solution of practical problems. These things have been especially emphasized. The subject of logarithms has been given special attention, the arrangement and preparation of tables being designed to give the computer maximum efficiency with minimum of labor. It appeals to the interest of the student and will certainly awaken in him a love for higher mathematics and a desire to pursue the subject further.
